

5

Claims

1. A device enabling sanitation of the hands of at least one person
10 and including a container (1) comprising a sanitary substance and a
valve (2, 12) making possible repeatedly distributing via an outlet
from said container (3) of the amount of said sanitary substance
desired,
c h a r a c t e r i z e d in that said valve comprises an openable closing
15 valve (2, 12), in that the device, in purpose of sanitation of, primarily,
said hands of said person at a proper moment independent of factual
location of said person, is arranged to be carried by said person in a
manner such that said openable closing valve (2) and said outlet (3a)
20 are facing away from said person and are reachable with at least one
hand of said person, in that said sanitary substance of said container
(1) is pressurized, exposed to or by gravitation, or in any other way
influenced to, in a single motion and immediately, distribute desired
and depending on manual action time of said openable closing valve
25 (2) amount of sanitary substance via said outlet (3a), as soon as said
openable closing valve (2) is opened, and in that said container (1) is
designed to collapse essentially without letting in air to the inner of
the container (1), when emptying said container.
2. The device according to Claim 1,
c h a r a c t e r i z e d in that said openable closing valve (2) is
30 openable in one direction while executing a counteraction in an
essentially opposite direction.
3. The device according to Claim 1 and 2, respectively,
c h a r a c t e r i z e d in that said openable closing valve (2) is
openable in a vertical direction essentially from below and upwards
35 and preferably when executing a counteraction essentially from up
and downwards.
4. The device according to Claim 1, 2, and 3, respectively,
c h a r a c t e r i z e d in that said outlet (3a) at least essentially in a
horizontal direction discharges at a distance from the container (1).
- 40 5. The device according to Claim 2, 3 and 4, respectively,
c h a r a c t e r i z e d in that said outlet (3a) is located in such a
manner relatively to an opening mechanism (5, 4a, 4b) of said valve
(2) that the distribution of said sanitary substance is provided in the
same hand as used for opening said valve (2).
- 45 6. The device according to any of the preceding Claims 1-5,
respectively,

- 5 c h a r a c t e r i z e d in that said valve (2) and said outlet (3) are designed as an undivided unit, located in a lower part of said container (1) having the outlet (3a) essentially directed downwards.
7. The device according to any of the preceding Claims 1-6, respectively,
- 10 c h a r a c t e r i z e d in that it includes a container (1) having preferable flexible walls, which container (1) is essentially sealed airtightly or is in relevant cases airtightly locked after supplying said sanitary substance.
8. The device according to any of the preceding Claims,
- 15 c h a r a c t e r i z e d in that it is designed (8, 9, 10, 11) to be applied relatively to the outer garment of said person and preferable distal thereof.
9. The device according to any of the preceding Claims,
- 20 c h a r a c t e r i z e d in that it is designed (8, 9, 10, 11) to be detachable applied relatively to an outer garment respectively to said outer garment of said person and preferably applied distal thereof.
